Backend Developer

Junior Backend Developer specializing in Node.js, Express.js, and NestJS, with hands-on experience building RESTful APIs and working with MySQL and MongoDB. Comfortable writing clean, maintainable JavaScript with a focus on scalable architecture and well-structured code. Eager to contribute to a collaborative team, keep learning, and grow into more complex backend challenges.

SKILLS

Technical Skills

- **Languages & Runtime:** JavaScript, Node.js, TypeScript
- **Frameworks:** Express.js, Nest.js
- **Databases**: SQL, ORM Sequelize, NoSQL (MongoDB), ODM Mongoose, Redis DB
- **API Development:** REST API, GraphQL, Validation
- **Authentication & Security:** Authentication & Authorization, Encryption and Hashing, Helmet, CORS, CSRF Protection, Rate Limiting, Sessions & Cookies, Social login
- **Backend Concepts:** Error Handling, File uploads, Relation two ways, Pagination, Sending email (Nodemailer)
- **Real-Time & Background Processing:** Socket.io, CRON Jobs, Create PDF, Create QR Code
- **Tools & DevOps Basics:** Git, GitHub, Postman, Docker
- **Computer Science Fundamentals:** Data Structures, Algorithms, OOP, SOLID Principles
- **Development Practices:** Agile Methodologies, Unit Testing

Soft Skills

- Problem Solving
- Critical Thinking
- Self-learning
- Adaptability
- Communication

Languages

- Arabic (Native)
- English (Advanced)

EDUCATION & TRAINING

- Backend Development Diploma using Node.js, Route Academy — 2026
- Node.js from Scratch, Cloud Native Base Camp — 2026
- Problem-Solving Boot Camp, Elevate — 2025
- Database Fundamentals, Mahara Tech — 2025
- Programming Fundamentals Diploma, Route Academy — 2025

- Mastering Object-Oriented Programming (OOP) using C++, Mahara Tech — 2025
- CS50: Introduction to Computer Science, Harvard University — 2025

PROJECTS

- **Hurayra Pet Foods – UAE**

  - Hurayrah Backend is an enterprise-grade e-commerce platform built with Node.js and Express using a modular JavaScript architecture. It features seamless Odoo ERP integration for automated inventory synchronization and Jeebly for streamlined third-party logistics. An asynchronous core powered by Bull queues handles background operations, while robust security, validation, and a comprehensive Jest test suite ensure high reliability.

- **Saraha App**

  - An anonymous messaging application using Node.js and Express.js, following a clean repository pattern architecture. The application features a complete authentication system with JWT-based authorization, token revocation, and social login via Gmail. Security was enforced through encryption, password hashing, Helmet, rate limiting, and CSRF protection. Additional features include input validation, local file uploading, email notifications via Nodemailer, and database transactions. The project was deployed to a live server and structured using industry-standard middleware and project setup practices.

- **Blog App**

  - A Blog App Built with Node.js, Express and MySQL.

  - Developed a RESTful backend for a blog application with secure user authentication. Implemented user signup and login with password hashing (bcrypt) and JWT-based authentication. Designed and integrated a MySQL database using connection pooling, handled validation and error scenarios, and tested all APIs using Postman. The system is ready for frontend integration and scalable feature expansion.
